10/7/2014	SB1400484	820 26TH ST NE	We propose drilling three, six-inch diameter geotechnical test borings using the hollow stem auger method to evaluate the subsurface conditions. The proposed test boring depths will be ten feet below the existing ground surface. Drilling equipment will be decontaminated between each hole to avoid cross contamination throughout the site. Upon completion, the geotechnical test borings will be backfilled with grout to the existing ground surface within 24-hours. The borehole will be tremie-grouted in one continuous operation with a positive displacement pump using a bentonite slurry mix from the bottom of the borehole upward. Drilling spoils including soils and water from the test borings will be containerized in 55-gallon drums to be removed for disposal after chemical laboratory results of the spoils have been received and reviewed. The soil borings diameter two inches by a depth of 15 feet. Monitoring wells diameter two inches by a depth of 15 feet. Following the completion of boring and collection of soil and groundwater samples, all borings will be abandoned properly. Temporary wells will be pulled from the boreholes and borings will be abandoned according to the DDOE Well Abandonment Requirement, Section 8 in DDOE Well Construction Requirements. Bentonite grout will be used to abandon borings, the grout to water ration will consist of two pounds of bentonite hydrated with 1 gallon of water. Work will be conducted under DDOE regulation and per site plans, work plans report, DDOE-DC Well Construction and Schematic forms. The site address based on DC Tax and revenue is 4001-4031 South Capitol, Street SW., existing commercial shopping center. 10/27/2014	SB1500019	4037-4039 SOUTH CAPITOL ST SW	We propose drilling two, six-inch diameter geotechnical test borings using the hollow stem auger method to evaluate the subsurface conditions. The proposed test boring depths will be forty feet below the existing ground surface. Drilling equipment will be decontaminated between each hole to avoid cross contamination throughout the site. Upon completion, the geotechnical test borings will be backfilled with grout to the existing ground surface within 24-hours. The borehole will be tremie-grouted in one continuous operation with a positive displacement pump using a bentonite slurry mix from the bottom of the borehole upward. Drilling spoils including soils and water from the test borings will be containerized in 55-gallon drums to be removed for disposal after chemical laboratory results of the spoils have been received and reviewed.
